NimbusDesk Product Documentation

Document ID: NL-PRD-001 | Version: 5.4 | Effective: 1 September 2026 | Owner: Product and Engineering

1. Overview

NimbusDesk is a cloud-based customer support platform. It brings emails, chat, WhatsApp messages, and phone calls into one shared inbox where support agents work on tickets. NimbusDesk includes automation, service level agreement (SLA) tracking, reporting, and a REST API.

2. Plans and Pricing

Feature	Starter	Growth	Enterprise
Price per agent per month (monthly billing)	INR 799	INR 1,899	Custom quote
Maximum agents	5	100	Unlimited
Channels	Email and web widget	Email, web widget, and WhatsApp	All channels including voice
Automation rules	10	100	Unlimited
API rate limit	100 requests per minute	500 requests per minute	2,000 requests per minute
Ticket data retention	24 months	5 years	Configurable
Uptime SLA	None	99.9 percent	99.95 percent
Support	Email, 2 business days	Email and chat, 8 hours	24x7 phone and a dedicated manager
Single sign-on (SSO)	Not available	Add-on, INR 20,000 per month	Included

Annual billing gives a 20 percent discount on the monthly price. All plans include a 14-day free trial with no credit card required. Prices exclude GST at 18 percent.

3. Tickets and SLA Policies

Every customer message becomes a ticket with a status of New, Open, Pending, On Hold, Solved, or Closed. Solved tickets are closed automatically after 7 days of no reply. Default first-response SLA targets are:

Priority	First response target	Resolution target
Urgent	1 hour	8 hours
High	4 hours	24 hours
Normal	8 hours	3 business days
Low	24 hours	7 business days

Admins can edit SLA targets and business hours under Settings > SLA. Tickets that are close to breach (at 80 percent of the target time) turn amber in the inbox, and breached tickets turn red and notify the team lead.

4. Automation and Integrations

- Automation rules follow a trigger, condition, action pattern, for example: when a ticket with the tag billing is created, assign it to the Finance group and set priority to High.
- Native integrations: Slack, Jira, Shopify, Salesforce, and Google Workspace.
- The Shopify integration shows the customer's recent orders inside the ticket sidebar (Growth and Enterprise).
- Webhooks send an event to your URL when a ticket is created or updated.

5. REST API

- Base URL: https://api.nimbusdesk.example/v2
- Authentication: send an API token in the header Authorization: Bearer YOUR_TOKEN. Tokens are created by admins under Settings > API and can be revoked at any time.
- Rate limits follow the plan (see section 2). When the limit is exceeded the API returns HTTP 429 with a Retry-After header.
- Pagination: list endpoints return up to 50 items per page and use a cursor value in the next_cursor field.
- Webhooks are retried 5 times with exponential backoff, after 1, 5, 30, 120, and 600 seconds. After 5 failures the webhook is disabled and the admin is emailed.

Endpoint	Method	Purpose
/tickets	GET, POST	List or create tickets
/tickets/{id}	GET, PATCH, DELETE	Read, update, or delete a ticket
/tickets/{id}/replies	POST	Add a public reply or internal note
/customers	GET, POST	List or create customers

6. Troubleshooting

Problem	Likely cause and fix
Emails are not creating tickets	Check that mail forwarding points to your support address (for example support@yourcompany.nimbusdesk.example) and that SPF and DKIM records are set. Allow up to 15 minutes for DNS changes.
Chat widget does not load	The website domain is missing from the allowlist. Add it under Settings > Channels > Web Widget > Allowed domains.
SSO error SSO-102	The SAML certificate has expired. Upload a new certificate from your identity provider.
SSO error SSO-205	The user's email does not match any NimbusDesk agent. Invite the agent first, then retry.
API returns 401	The token is missing, expired, or revoked. Create a new token.
API returns 429	Rate limit exceeded. Wait for the number of seconds in Retry-After, or upgrade the plan.

7. Security and Data

All data is encrypted in transit (TLS 1.2 or higher) and at rest (AES-256). Customer data is hosted in AWS Mumbai (ap-south-1) by default. Enterprise customers can choose Frankfurt or Singapore. NimbusDesk is SOC 2 Type II and ISO 27001 certified. Customers can export all their data as CSV or JSON from Settings > Data Export, and deleted accounts are fully purged after 30 days.
